

Visualization Canvas

Story <i>What's the problem?</i> <i>What question do you want to answer?</i> <i>Why did you choose it?</i> <i>What is the context?</i>	<p>Exploring the impact of social media usage on mental health.</p> <p>How does the amount of time spent on social media impact the mental health of its users?</p> <p>To understand the psychological impacts of social media.</p> <p>This project looks at how using social media affects people's mental health. It focuses on different people, like how old they are, whether they are male or female, and what they see on social media. The goal is to find out if spending a lot of time on social media can make people feel anxious, sad, or bad about themselves.</p>
Audience <i>Who is going to use the viz?</i>	<p>People who are interested in learning how social media affects mental health. This includes mental health experts, students studying psychology, and anyone curious about how using social media can influence their mood and feelings.</p>
Data <i>What type of data do you have?</i> <i>Where is it stored?</i> <i>Is it static or changing?</i>	<p>Data includes age, gender, relationship status, occupation, social media usage patterns, and so on.</p> <p>Kaggle</p> <p>Static</p>
Tools <i>What tool(s) are you going to use?</i> <i>Why did you choose it?</i>	<p>Dash for creating interactive visualizations.</p> <p>We wanted to work with Dash because we both really enjoyed using it during our homework and found it fun.</p>
